List of values:

Additional Client Validation Rule

Additional Server Validation Rule

This table is validated using predefined rules, nightly.

Description

Only five tables are needed to produce all the adverse event reports. The Response table contains all the data for all CRFs. The value text field contains both numeric and character data. This column is character and length 200 bytes.

Additional Client Validation Rule

Additional Server Validation Rule

the RESPONSE and RCDMS views have been tested thoroughly.

Description

First level views consist of RCDMS_VIEW and RESPONSES_VIEW. These views along with Table T1-T5 are used to create the second level Oracle views.

Additional Client Validation Rule

Additional Server Validation Rule

There appear to be some problems with the 2nd level Oracle views. SAS users cannot extract critical data dictionary data from Oracle views without hanging the server. Not only does the SAS user have to reboot the client, the user creates a ghost connection that only the DBA can clean up.

Description

Second level Oracle views form the input for the SAS views of the second level Oracle views. These views could easily be eliminated.

Eliminating these views would simplify the design and greatly speed up access to Oracle data. The SAS views of the second level Oracle views would be replaced by SAS views of first level Oracle views.

Even better would be SAS views of Oracle tables.

Domain SAS Adverse Event Reports

Name: SAS Adverse Event Reports
Code: SAS_ADVERSE_EVENT_REPORTS
Label:
Type: A
Length: 40 **Precision:** 0

Check

Low value:
High value:
Default value:
Unit:
Picture:
Uppercase: No **Lowercase:** No **Can't modify:** No
List of values:

Additional Client Validation Rule

Additional Server Validation Rule

All Adverse event reports are coded in Proc Report. A dataset is produced by proc report and that dataset is used for QC.

Description

These reports are encapsulated postscript ready for Adobe publishing software. These reports are not suitable for MS-Word, however QUARK-Express, Ventura Publisher 7, Adobe PageMaker and Adobe FrameMaker can produce Adobe Portable Format without any lose of detail. Note that Postscript printers and PDF writer are not used to produce PDF. Only Adobe Distiller is used. This assures maximum detail. All decimal points and minus signs are clearly represented

Domain SAS Objects

Name: SAS Objects
Code: SAS_OBJECTS
Label:
Type: A
Length: 40 **Precision:** 0

Check

Low value:

High value:

Default value:

Unit:

Picture:

Uppercase:

No

Lowercase:

No

Can't modify:

No

List of values:

Additional Client Validation Rule

Additional Server Validation Rule

SAS object validation is done nightly.

Description

SAS Objects consist of many format types, ie grseg (postscript) catalogs, SAS datasets, SAS formats, Catams (flat files), etc.

Additional Client Validation Rule

Additional Server Validation Rule

Description

SAS views of second level Oracle views further complicate SAS report generation. Most report generators require a data model (Schema) designed for simple generation of reports. The process model and SAS schema both require a SAS data model to be created from the SAS views of the second level Oracle views.

If the Pharmaceutical company does not want to create the SAS schema, then CompCraft suggests all report generation be done with a product like Crystal Reports (Seagate Inc). Since Crystal Reports can take advantage of the relational data model, where SAS cannot (because of the many layers of views).

External Entity Table T5 RESPONSES

Name: Table T5 RESPONSES
Code: TABLE_T5_RESPONSES
Label: Main Fact Table for Oracle Clinical

Description

The Reponses table contains all the data recorded on all the CRF forms for a given trial. The table is skinny but very long. The table contains 17 columns. Key columns appear to be

DCM_QUESTION_ID -- Foreign Key to Question Text
RESPONSE_ID -- Foreign Key to Possible Responses
VALUE_TEXT -- Response Text from CRF

Note the many administrative columns.

Process Publish

Name: Publish
Code: PUBLISH
Label: Context Diagram
Number: 1
Lowest level: No

Description

This Process Model defines all processing needed to produce Adverse Event related information for FDA submission.

Input is Oracle Tables (not Views).

Output is Adobe Postscript reports ready for Adobe Pagemaker publishing software.

This Root process defines all the processing needed to:

1. Transform Oracle tables to 1st level Oracle Views.
2. Combine first level Oracle Views and Oracle Tables into 2nd Level Oracle Views
3. Recode 2nd Level Oracle views using SAS Views of 2nd Level Oracle Views.
4. Use these SAS Views to create a SAS schema consisting of SAS Objects.
5. Use this SAS schema to create and SAS code to produce postscript documentation for Adobe publishing software.
